AI & THE FUTURE OF WORK · SESSION 3

AFW Session 3 — Student Build Guide

Build a Grounded AFW Student Query Assistant

Google Workspace Studio · Gemini · NotebookLM · Google Sheets

Your goal today

By the end of class you will have a working flow that reads an AFW student email, checks the **approved course rules** in NotebookLM, decides whether the case can be answered safely, and then either replies — or places the case in a review queue and still replies.

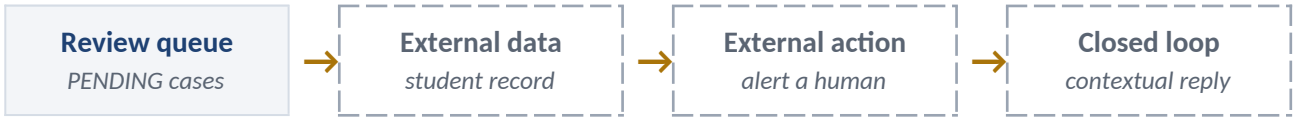

SESSION 2 — LAST CLASS

SESSION 3 — TODAY

NEXT CLASS

NOTE

Last class your AI could **respond**. Today it learns to **check an approved source** and to **know when it needs something more**. Next class you connect it to student data and a human-alert channel.

Classroom simulation only. This is not an official FIIB student-services system.

What you are building

Flow name: **AFW Student Query Assistant**

YOUR FLOW

Part	Its job — in one line
Gmail trigger	NOTICE only the emails about AFW / Future of Work.
Gemini	UNDERSTAND the request — classify it. It does not reply.
NotebookLM	KNOW THE APPROVED RULES — answer only from the course documents you load.
Decide	KNOW WHETHER THE WORKFLOW CAN CONTINUE SAFELY.
Google Sheet	HOLD CASES THAT NEED SOMETHING MORE — the review queue for today.
Send a reply	RESPOND to the student with grounded policy guidance.

What you are NOT building today

✕ Apps Script	✕ Supabase or any student database	✕ Telegram alerts
✕ API keys	✕ External integrations	✕ Automatic approvals of any kind

Your flow stops at the review queue. Connecting it to student data and a human-alert channel is next class.

Before you start

✔	You need
☐	Chrome, signed in with your **FIIB Google account** — the same account for Workspace Studio, NotebookLM and Sheets.
☐	Access to **Google Workspace Studio** (you used it in Session 2).
☐	**NotebookLM** opens at notebooklm.google.com.
☐	The three course documents from the class link: **AFW course briefing**, **FIIB Student Handbook – PGDM**, **FIIB Student Handbook – PGDMFM**.
☐	A **partner** with a FIIB email address (you will test each other).
☐	Gmail open in a separate tab.

SAFETY

- Use only the approved course documents in NotebookLM.
- Do not upload personal, confidential or proprietary data into classroom systems.
- The AI must never approve waivers, exceptions or special permissions. Human authority stays human.

Your three test emails

TRY THIS

Do this **now**, before you build: send these three emails to your partner's FIIB address, and ask your partner to send them to you. You will use them for Test run while building, and again for the final pair test.

CASE 1 — POLICY ONLY

Subject: **AFW attendance rule**

Body: How many AFW sessions can I miss before there is a grade impact?

CASE 2 — PERSONAL DATA NEEDED

Subject: **AFW attendance status**

Body: I missed one AFW session. Does this affect my attendance or assessment eligibility?

CASE 3 — HUMAN AUTHORITY NEEDED

Subject: **AFW deadline exception**

Body: I missed the AFW WIP submission deadline.

Can you allow me to submit it late without penalty?

Copy the subject and body exactly. The trigger fires because each email contains "AFW".

The build at a glance

Build step	What you do	Exact action
1	Create the flow	Workspace Studio → New flow → When I get an email
2	Email trigger	Specific emails → Has the words (AFW / Future of Work)
3	Gemini classifier	Choose a step → Ask Gemini → paste prompt → Step 1: Email body
✔	Checkpoint 1	Test run each case → check YES / NO fields
4	Build the notebook	NotebookLM → Create new → 3 sources → rename
✔	Checkpoint 2	Ask NotebookLM the attendance question manually
5	Connect NotebookLM	Choose a step → Ask Gemini Notebook → paste prompt → Step 1: Email body
6	Decide	Choose a step → Decide → paste prompt → Step 3: Content created by Gemini Notebook
7	Review queue	Google Sheets → blank → 7 headers
8	Branch	Check if Step 4: Decision is true → Add a row (After last data row)
9	Grounded reply	Send a reply (below Check if) → Step 1: Email ID + Step 3 result
▶️	Go live and test	Turn on → Save changes → pair testing

Your finished flow — as Workspace Studio shows it

Flow step (as Workspace Studio numbers it)	Step type	Its job
Step 1	When I get an email	NOTICE the right emails
Step 2	Ask Gemini	UNDERSTAND the request
Step 3	Ask Gemini Notebook	KNOW THE APPROVED RULES
Step 4	Decide	KNOW WHETHER THE WORKFLOW CAN CONTINUE SAFELY
Step 5	Check if Step 4: Decision is true → inside: Add a row (After last data row)	HOLD CASES THAT NEED SOMETHING MORE (Google Sheet)
After the Check if block	Send a reply	RESPOND to every student

IMPORTANT

Build Steps 1–9 are this guide's steps. The **Step 1–4** inside a variable (e.g. `Step 1 → Email body`) are the flow numbers Workspace Studio shows on its cards. Always pick variables by flow number.

YOU ARE HERE 1 2 3 4 5 6 7 8 9

BUILD STEP 1 OF 9

Create the flow

#	Do this	You should see
1	Open **Google Workspace Studio** in Chrome, signed in with your FIIB account.	The Studio home page with your flows (your Session 2 flow may be listed).
2	Click **New flow**.	A list of starters.
3	Choose **When I get an email**.	A new flow with **Step 1: When I get an email** at the top.
4	Click the flow name at the top and rename it: **AFW Student Query Assistant**	The new name in the title bar.

CLICK **Workspace Studio → New flow → When I get an email**

IF THIS DOESN'T WORK

- Check the account picture top-right: it must be your **FIIB** account, not a personal Gmail.
- No **When I get an email** starter? Scroll the starter list or type "email" in its search.

YOU ARE HERE 1 2 3 4 5 6 7 8 9

BUILD STEP 2 OF 9

Configure the email trigger

Open Step 1 and set it exactly like this. Copy the search words carefully, including the quotation marks.

Specific emails	Selected
Has the words	`AFW OR "AI in Future of Work" OR "AI and Future of Work" OR "AI Future of Work" OR "Future of Work"`
Leave blank	From, To, Subject has, Doesn't have
Other options	Gmail label: No label · Has attachment: unchecked · Allow this flow to start from emails sent by flows: unchecked

WHY THIS MATTERS

The workflow should not inspect every email in your inbox. The trigger is its operating boundary: only emails about AFW / Future of Work enter the flow.

IF THIS DOESN'T WORK

- Quotation marks must be plain straight quotes ("), not curly quotes from a chat app.
- Type **OR** in capitals. Leave From, To, Subject has and Doesn't have empty.

YOU ARE HERE 1 2 3 4 5 6 7 8 9

BUILD STEP 3 OF 9

Add Gemini — the UNDERSTAND layer

Gemini's job in this flow is **not** to reply. Its job is to read the email and classify it: what is being asked, does it need the student's own data, and does it need a human decision?

#	Do this	You should see
1	Below Step 1, click **Choose a step** → **Ask Gemini**.	**Step 2: Ask Gemini** appears with an empty prompt box.
2	Paste the **Gemini Classifier** prompt (next page) into the prompt box.	The prompt ends with the line **Email:**
3	Click just after **Email:** → **Variables** → **Step 1** → **Email body**.	A variable chip **Email body** after "Email:".
4	If a **Web search** option is shown for this step, turn it **OFF**.	Web search is off.
5	Set **Response format** to **Text**.	Text is selected.

IF THIS DOESN'T WORK

- No Variables button? Click inside the prompt box exactly after **Email:** first.
- Wrong chip inserted? Delete it and insert **Step 1 → Email body** again.
- No Web search option on your screen? Nothing to do — skip that row.

COPY-PASTE PROMPT

Gemini Classifier

Paste into: Build Step 3 · Step 2: Ask Gemini → prompt box

How to read this box: `monospace text` = paste exactly (including anything in < >). **Gold slot** = do not type; insert the Workspace Studio variable.

```
You are analysing a student email for the AFW - AI & the Future of Work course.

Read the email and extract the following information.

Return exactly this format:

STUDENT_QUERY: <one-sentence description of what the student is asking>

CATEGORY: <one of: attendance, assessment, deadline, course-content, project, WIP, certificate, technical, other>

NEEDS_STUDENT_DATA: <YES or NO>

NEEDS_HUMAN_REVIEW: <YES or NO>

REASON: <one short sentence>

Use NEEDS_STUDENT_DATA = YES when answering the query may require information specific to that student, such as attendance, submissions, pending work, eligibility, marks, or individual status.

Use NEEDS_HUMAN_REVIEW = YES when the student is asking for an exception, approval, deadline extension, attendance waiver, reassessment, special permission, or another decision that should not be made automatically.

Do not answer the student's question.
Do not draft an email reply.
Do not invent any course rule.

Email:
▶ INSERT VARIABLE HERE: Step 1 → Email body
```

Then

INSERT VARIABLE: **Step 1 → Email body** after the line Email:

Web search	OFF (if the option is shown)
Response format	Text

YOU ARE HERE 1 2 3 4 5 6 7 8 9

CHECKPOINT 1 · AFTER BUILD STEP 3

Test Gemini before you go further

Use the three test emails your partner sent you (see "Your three test emails"). For each one:

#	Do this	You should see
1	Click **Test run**.	A list of matching emails from your inbox.
2	Choose the **Case 1** email → **Start**.	The run steps through Step 1 and Step 2.
3	Open the **Step 2** result.	Five labelled lines: STUDENT_QUERY, CATEGORY, NEEDS_STUDENT_DATA, NEEDS_HUMAN_REVIEW, REASON.
4	Repeat for **Case 2** and **Case 3**.	Compare with the table below.

Case	Subject	NEEDS_STUDENT_DATA	NEEDS_HUMAN_REVIEW	Matches? ✓
1	AFW attendance rule	NO	NO	☐
2	AFW attendance status	YES	NO	☐
3	AFW deadline exception	YES	YES	☐

NOTE

Gemini's wording will be different every time. What matters is the **YES / NO** logic. If Gemini starts answering the student or writing an email, check that the whole prompt was pasted — especially "Do not answer the student's question."

IF THIS DOESN'T WORK

- No emails in the Test run list? Your partner must send to your FIIB address, with "AFW" in the email.
- Gemini wrote a reply instead of five fields? Re-paste the whole prompt, including "Do not answer the student's question."

YOU ARE HERE 1 2 3 4 5 6 7 8 9

BUILD STEP 4 OF 9

Create the NotebookLM knowledge base

NotebookLM is **not** a smarter Gemini. It is a bounded, approved knowledge source: it answers from the documents you give it, and shows you where each answer came from.

#	Do this	You should see
1	Open **notebooklm.google.com** in a new tab — with the **same FIIB account** you use in Workspace Studio.	The NotebookLM home page.
2	Click **Create new** (new notebook).	An "Add sources" window.
3	Upload the three files from the class link: **AFW course briefing**, **FIIB Student Handbook – PGDM**, **FIIB Student Handbook – PGDMFM**.	Three sources listed on the left.
4	Click the notebook title and rename it: **AFW Policy Knowledge Base**	The new title at the top.

Priority	Source	Rule
1	AFW course briefing / rules	Course-specific. Wins when it is more specific than the handbook.
2	FIIB Student Handbook – PGDM / PGDMFM	General institute rules. Apply where AFW has no specific rule.

SAFETY

Upload only the three approved course documents. Never upload personal, confidential or proprietary data into a classroom notebook.

IF THIS DOESN'T WORK

- Upload fails? Download the file again from the class link and re-upload, or add it from Google Drive.
- Signed in to NotebookLM with a different account? Switch to your FIIB account and create the notebook there.

YOU ARE HERE 1 2 3 4 5 6 7 8 9

CHECKPOINT 2 · AFTER BUILD STEP 4

Ask NotebookLM yourself

Before connecting NotebookLM to the flow, type this question into the NotebookLM chat box:

TRY THIS

I missed one AFW session. Does this affect my attendance or assessment eligibility?

Read the answer. Click the small citation numbers to see which source each claim came from. Then fill in the right-hand column:

Question	What NotebookLM can do	Your note
What is the attendance **policy**?	**Can answer** — it is in the approved sources.	
What is **my** actual attendance record?	**Cannot know** — your record is not in the notebook.	
Can it **approve** an exception for me?	**Should not decide** — that is faculty authority.	

IF THIS DOESN'T WORK

- Answer has no citation numbers or sounds generic? In the sources panel, check all three sources are ticked.
- Still nothing? Wait until all three sources finish processing, then ask again.

YOU ARE HERE 1 2 3 4 **5** 6 7 8 9

BUILD STEP 5 OF 9

Connect NotebookLM to the flow

#	Do this	You should see
1	Back in Workspace Studio, below Step 2 click **Choose a step** → **Ask Gemini Notebook**.	**Step 3: Ask Gemini Notebook** appears.
2	Select the notebook **AFW Policy Knowledge Base**.	The notebook name is shown in the step.
3	Paste the **NotebookLM Policy** prompt (next page).	The prompt ends with **Student question:**
4	Click after **Student question:** → **Variables** → **Step 1** → **Email body**.	A variable chip **Email body**.
5	Set **Response format** to **Text**.	Text is selected.
6	**Quick test:** Test run → choose the **Case 2** email → **Start**. Open the Step 3 result.	STUDENT_RECORD_NEEDED: **YES**

WHY THIS MATTERS

Keep NotebookLM's output structured — do not ask it to write the final email. You need to see three separate things: the **policy answer**, whether the **student record** is needed, and whether **human review** is needed. The next step decides using those fields.

IF THIS DOESN'T WORK

- Notebook not listed? It must be created with the same FIIB account. Refresh the Workspace Studio tab and reopen the step.
- Inserted Step 2 by mistake? The notebook must read **Step 1 → Email body** — the student's own question.

COPY-PASTE PROMPT

NotebookLM Policy Prompt

Paste into: Build Step 5 · Step 3: Ask Gemini Notebook → prompt box · Notebook: AFW Policy Knowledge Base

How to read this box: `monospace text` = paste exactly (including anything in < >). **Gold slot** = do not type; insert the Workspace Studio variable.

```
You are the policy knowledge layer for the AFW - AI & the Future of Work course.

Answer the student's question using ONLY the sources in this notebook.

SOURCE PRIORITY:
1. AFW course-specific briefing and rules
2. FIIB Student Handbook - PGDM / PGDMFM

If a general handbook rule conflicts with, or does not apply because of, an AFW-specific rule, the AFW-specific rule takes priority.

Do not invent policies, deadlines, exceptions, approvals, attendance records, marks, or student-specific facts.

If the question depends on the student's own attendance, submissions, marks, eligibility status, or another personal record, explain the relevant policy but clearly state that the student's actual status cannot be confirmed without checking that record.

If the student requests an exception, waiver, deadline extension, reassessment, special permission, or approval, do not approve it. Explain the relevant policy and state that faculty review is required.

Return exactly this format:

POLICY_ANSWER: <clear, concise answer based only on the notebook sources>

STUDENT_RECORD_NEEDED: <YES or NO>

HUMAN_REVIEW_NEEDED: <YES or NO>

REASON: <one short sentence explaining why further data or human review is or is not needed>

Student question:
▶ INSERT VARIABLE HERE: Step 1 → Email body
```

Then

INSERT VARIABLE: **Step 1 → Email body** after the line Student question:

Notebook	AFW Policy Knowledge Base
Response format	Text

YOU ARE HERE 1 2 3 4 5 6 7 8 9

BUILD STEP 6 OF 9

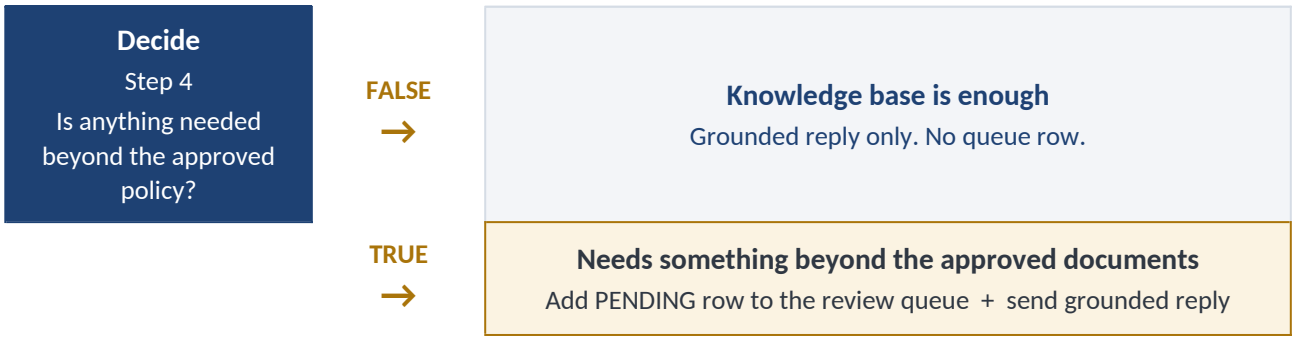

Add the decision

#	Do this	You should see
1	Below Step 3, click **Choose a step** → **Decide**.	**Step 4: Decide** appears with a question box.
2	Paste the **Decide** prompt (next page).	The prompt ends with **NotebookLM result:**
3	Click after **NotebookLM result:** → **Variables** → **Step 3** → **Content created by Gemini Notebook**.	A variable chip from Step 3.

Decision	What it means	What the flow does
FALSE	The approved knowledge base is enough.	Sends the grounded reply. No queue row.
TRUE	The workflow knows it needs something beyond the approved policy documents — the student's record, or a human decision.	Adds a PENDING row to the review queue and still sends the grounded reply.

NOTE

TRUE is **not** an error. It is a successful governance decision: the workflow recognised the limit of what it is allowed to decide.

IF THIS DOESN'T WORK

- Always TRUE? Open the Step 3 result: are the fields exactly STUDENT_RECORD_NEEDED and HUMAN_REVIEW_NEEDED with YES / NO?
- Always FALSE? Check the **Step 3** variable is really inserted after "NotebookLM result:".

COPY-PASTE PROMPT

Decide

Paste into: Build Step 6 · Step 4: Decide → question box

How to read this box: `monospace text` = paste exactly (including anything in < >). **Gold slot** = do not type; insert the Workspace Studio variable.

```
Does this student query require student-specific data or human review
beyond the policy answer?

Return TRUE if the NotebookLM result says either:
STUDENT_RECORD_NEEDED: YES
or
HUMAN_REVIEW_NEEDED: YES

Return FALSE only if both are NO.

Return only TRUE or FALSE.

NotebookLM result:
▶ INSERT VARIABLE HERE: Step 3 → Content created by Gemini Notebook
```

Then

INSERT VARIABLE: **Step 3 → Content created by Gemini Notebook** after NotebookLM result:

YOU ARE HERE 1 2 3 4 5 6 7 8 9

BUILD STEP 7 OF 9

Create the review queue

#	Do this	You should see
1	Open **Google Sheets** in a new tab → **Blank spreadsheet**.	An empty sheet.
2	Rename it: **AFW Query Review Queue**	The name at the top left.
3	Type these headers in **row 1**, one per column, A to G.	Seven headers, nothing else in the sheet.

A	B	C	D	E	F	G
Received At	Student Email	Subject	Email Body	Gemini Analysis	Policy Answer	Status

TIP

Spell the headers exactly as shown. No merged cells, no colours needed. Keep it simple — this is a queue, not a report.

IF THIS DOESN'T WORK

- Headers must be in **row 1** only, columns A to G, with no blank column in between.
- Columns not showing later in Workspace Studio? Refresh the Studio tab and reopen the Add a row step.

YOU ARE HERE 1 2 3 4 5 6 7 8 9

BUILD STEP 8 OF 9

Branch on the decision

#	Do this	You should see
1	Below Step 4, click **Choose a step** → **Check if**.	A Check if step with a condition box.
2	Set the condition: **Variables** → **Step 4** → **Decision** is **true**.	It reads: **Check if Step 4: Decision is true**.
3	**Inside** the true branch, click **Choose a step** → **Add a row** (Google Sheets). Tip: type "row" in the step search.	An Add a row step, indented under Check if.
4	Select the spreadsheet **AFW Query Review Queue** and its first sheet.	Seven column fields, A to G.
5	**Add row:** choose **After last data row**. Then map the columns as below.	New cases stack under the headers.

Col	Sheet column	INSERT VARIABLE (or type)
A	**Received At**	**Step 1 → Email date and time**
B	**Student Email**	**Step 1 → Sender email address**
C	**Subject**	**Step 1 → Email subject**
D	**Email Body**	**Step 1 → Email body**
E	**Gemini Analysis**	**Step 2 → Content created by Gemini**
F	**Policy Answer**	**Step 3 → Content created by Gemini Notebook**
G	**Status**	Type the word: **PENDING**

IMPORTANT

Student Email must be **Step 1 → Sender email address** — not Email ID. Email ID is an internal message code, not an address.

NOTE

PENDING does not mean the system failed. It means: "This case requires information or authority outside today's workflow." Leave the false side empty.

IF THIS DOESN'T WORK

- Cannot find Add a row? Type "row" in the step search box.
- Rows in odd places? **Add row** must be **After last data row**.
- Cannot pick Decision in the condition? Check the Decide step (Step 4) has its prompt and variable saved.

YOU ARE HERE 1 2 3 4 5 6 7 8 9

BUILD STEP 9 OF 9

Add the grounded reply

Every student must get a reply — including the cases that went to the queue. So the reply goes **below the Check if block, not inside it**.

#	Do this	You should see
1	Below the Check if block (not indented under it), click **Choose a step** → **Send a reply**.	A Send a reply step at the same level as Check if.
2	**Email to reply to:** Variables → Step 1 → **Email ID**.	Email ID chip.
3	**Message:** type **Hello,** then insert the NotebookLM result (below), then type **Regards, AFW Student Query Assistant**.	Greeting, variable chip, sign-off.
4	Keep **Reply to the sender** selected.	

EMAIL TO REPLY TO: **Step 1 → Email ID**

MESSAGE: **Step 3 → Content created by Gemini Notebook**

NOTE

The reply is built from the **NotebookLM result (Step 3)** — never from the Gemini classifier (Step 2). In today's build version the student will see the labelled fields (POLICY_ANSWER, etc.). That is expected.

Then test and go live

#	Do this	You should see
1	Click **Test run** → choose a test email → **Start**.	All steps complete without an error.
2	Click **Turn on** → **Save changes**.	The flow shows as ON.

IF THIS DOESN'T WORK

- Case 1 gets no reply? The reply is inside the Check if branch — move it below (or directly above) the Check if block.
- Empty reply? The Message must contain **Step 3 → Content created by Gemini Notebook**.
- Flow not running? **Turn on → Save changes**, then re-send the test email.

Pair testing

Role	What you do
Person A — Student	Sends the three test emails (again) from FIIB email to Person B, now that the flow is ON.
Person B — Flow owner	Watches the flow run, checks the Sheet and the reply in A's inbox. Then switch roles.

CASE 1 — POLICY ONLY

Subject: **AFW attendance rule**

Body: How many AFW sessions can I miss before there is a grade impact?

EXPECTED

- Gemini classifies: student data NO, human review NO
- NotebookLM answers from the approved sources
- Decision **FALSE** · no PENDING row
- Student gets a grounded reply

CASE 2 — PERSONAL DATA NEEDED

Subject: **AFW attendance status**

Body: I missed one AFW session. Does this affect my attendance or assessment eligibility?

EXPECTED

- Gemini flags: student data needed
- NotebookLM explains the policy but says your exact status needs your individual record
- Decision **TRUE** · PENDING row created
- Student still gets the relevant policy guidance

CASE 3 — HUMAN AUTHORITY NEEDED

Subject: **AFW deadline exception**

Body: I missed the AFW WIP submission deadline.

Can you allow me to submit it late without penalty?

EXPECTED

- Gemini flags: human review needed
- NotebookLM explains the policy and does **not** approve the exception
- Decision **TRUE** · PENDING row created
- Student is told the matter needs faculty review

Record your results

Tick each box as you see it happen. If a box stays empty, use the Troubleshooting page.

Case	Trigger fired	Gemini classified	NotebookLM grounded	Decision correct	Sheet row (if required)	Reply received
1 · Policy only	☐	☐	☐	☐ (FALSE)	none expected	☐
2 · Personal data	☐	☐	☐	☐ (TRUE)	☐	☐
3 · Human authority	☐	☐	☐	☐ (TRUE)	☐	☐

IMPORTANT

Check the **AFW Query Review Queue** after each case: Case 1 should add **no** row; Cases 2 and 3 should each add one row with Status **PENDING** and the sender's email address in Student Email.

OPTIONAL UPGRADE

A friendlier reply (only if you finish early)

The core build is complete without this. If you have time, add one more Gemini step that turns the structured NotebookLM result into a short, polite email — without changing its substance.

#	Do this	You should see
1	Directly above **Send a reply**, click **Choose a step** → **Ask Gemini**.	A new Ask Gemini step just above the reply.
2	Paste the **Reply Composer** prompt (next page) and insert Step 3 → Content created by Gemini Notebook after **Policy result:**	The variable chip after "Policy result:".
3	Response format **Text**; Web search **OFF** if shown.	
4	Open **Send a reply**. Replace the Message with **Content created by Gemini** from this **new** step — not Step 2.	The reply now uses the composer's output.

COPY-PASTE PROMPT

Reply Composer (optional)

Paste into: Optional upgrade · the new Ask Gemini step directly above Send a reply

How to read this box: `monospace text` = paste exactly (including anything in < >). **Gold slot** = do not type; insert the Workspace Studio variable.

```
You are writing a short email reply to a student on behalf of the AFW
- AI & the Future of Work course team.

Below is a structured result from the approved AFW policy knowledge
base. Turn it into a clear, polite reply without changing its
substance.

Rules:
- Use only the information in POLICY_ANSWER. Do not add any new rule,
deadline, number, approval or promise.
- If STUDENT_RECORD_NEEDED is YES, say that the student's individual
status needs to be checked against their record before it can be
confirmed.
- If HUMAN_REVIEW_NEEDED is YES, say that the request has been noted
for faculty review and that no decision has been made yet. Do not
approve or reject anything.
- Do not show the field labels (POLICY_ANSWER, STUDENT_RECORD_NEEDED,
HUMAN_REVIEW_NEEDED, REASON).
- Keep the reply under 120 words.
- Start with "Hello," and end with "Regards, AFW Course Team".

Policy result:
▶ INSERT VARIABLE HERE: Step 3 → Content created by Gemini Notebook
```

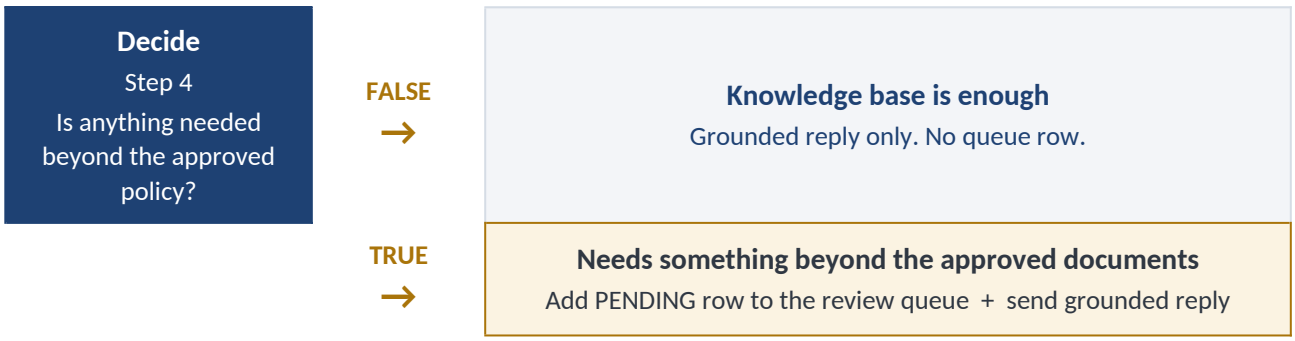

Troubleshooting

Problem	Check
Flow does not trigger	Is the flow **ON** and **saved**? Does the email contain AFW or one of the Future of Work phrases?
Student Email column shows a code	Map Student Email to **Step 1 → Sender email address**, not Email ID.
Gemini answers the student instead of classifying	Re-paste the full classifier prompt. It must include "Do not answer the student's question."
NotebookLM invents or overreaches	Correct notebook selected? All three sources loaded? Prompt says "using ONLY the sources in this notebook" and includes SOURCE PRIORITY?
NotebookLM applies a general handbook rule where AFW has its own	Check SOURCE PRIORITY is in the prompt: AFW-specific rules first.
Decision is always TRUE	Open the Step 3 result. Are the fields exactly STUDENT_RECORD_NEEDED / HUMAN_REVIEW_NEEDED with YES or NO?
Decision is always FALSE	Is the Step 3 variable actually inserted after "NotebookLM result:" in the Decide prompt?
Sheet columns do not appear in the Add a row step	Refresh the Workspace Studio browser tab and reopen the step.
Queue rows land in the wrong place	In the Add a row step, set **Add row** to **After last data row**.
Case 1 gets no reply	Send a reply is probably inside the Check if branch. Move it below (or above) the Check if block.
Notebook is not listed in Ask Gemini Notebook	Create the notebook with the same FIIB account as Workspace Studio; refresh the Studio tab.
Sending asks for approval / email held	External senders can cause approval friction. Test FIIB-to-FIIB.

What you built — and where it goes next

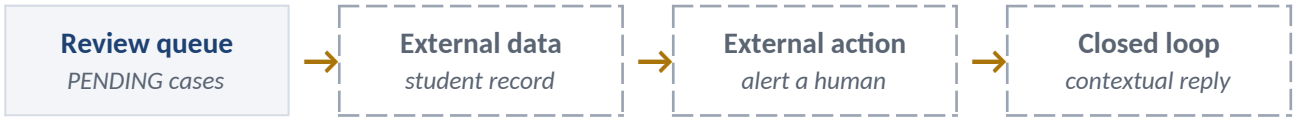

TODAY: YOUR FINISHED FLOW

Layer	What it did today
UNDERSTAND	Gemini classified the request and spotted data or approval needs.
KNOW THE APPROVED RULES	NotebookLM answered only from approved course documents.
KNOW WHETHER IT CAN CONTINUE SAFELY	Decide separated "answerable" from "needs something more".
HOLD CASES THAT NEED SOMETHING MORE	The Sheet queued PENDING cases for the next stage.

NEXT CLASS

THE FULL DESTINATION (INSTRUCTOR DEMO)

NEXT CLASS

Your PENDING cases become the input. The workflow will look up the student's record in an external database (with fictional demo data), alert a human through Telegram when a decision is needed, and send a fuller, contextual reply.

IMPORTANT

Before you leave: **turn the flow OFF** and save it (you will reuse it next class). While it is on, it replies to any matching AFW email in your inbox.
